

Ground Rolly IV

Our Rolly portable layflat hose coiler is a small lightweight, collapsible unit suitable for coiling hoses up to 76mm diameter and max length 20 metres. The unit can be easily reduced in size for storage by positioning the handle further down the shaft of the body.

MATERIALS:

Steel components with a Red gloss paint finish to the body.

WEIGHT: 11.6kg

DIMENSIONS: 1400 x 430mm when extended
650 x 430mm when collapsed

ROLLY IV

The patented ROLLY IV is able to wind layed out fire hoses on the ground easy, fast and in a very comfortable way. Fire hoses up to 75 mm (3") diameter and max. length of 30 m (100 ft) can be winded in dutch style or single folded in approx. 10 seconds. The two non-pneumatic tires makes the ROLLY IV completely maintenance-free and always ready to use on the scene.

HOSE REMOVAL AID

The magnetically adhering sleeve on the winding fork ensures effortless shedding of firm and center folded hoses. After the hose is winded, the new removing aid can be dropped off with the hose by lateral tilting of the ROLLY IV. The removing aid can be easily taken away from the winded hose and be placed back on the winding bracket.

SUPPORT FOOT

The foldable support foot guarantees a fast and secure parking of the ROLLY IV at the scene. Due to the magnetic support foot, the ROLLY IV can be used quickly for winding center folded hoses and protect the ROLLY IV from damage. The support food of galvanized steel is held magnetically on the ROLLY IV and can be easily expanded by foot.
